

## COMBINATION FINISHES

One of the major advantages offered by a whole range grid-mounting system is one of total flexibility: Flexibility in terms of installation and maintenance of the product; flexibility in terms of mixing contrasting finishes of plates and interiors.

One of the hallmarks of the Wandsworth range of accessories is the matching of complementary switch interiors on both switch plates and sockets. The trend for contrasting metal finishes on product is evident with door furniture and bathroom accessory manufacturers exploiting the stylish contrast between polished brass and bright chrome.

The modular design of the range of accessories within this brochure allows the designer to achieve this contrast with standard product and at no extra cost.

Whether it is Super Bright Chrome with Polished Brass, Polished Brass with Light Bronze or an antique finish with Super Bright Chrome – where a mixture of styles can combine to great effect – Wandsworth has the answer.

Please remember to state clearly the finishes of both plates and interiors on any orders, if plate finish only is detailed we will assume standard combinations are required.

Samples of any combinations can be demonstrated for consideration.
