

Hand Dryers

Hand and face dryers eliminate the need for either paper towels or roller linen towels and the ensuing untidiness and 'running out' just when most needed. Washrooms are tidier and more hygienic. Employees and customers are delighted with the convenience and the fast drying – under 30 seconds.

Dryers save the labour needed to refill paper and linen towel dispensers. They require no cupboard space to store towels.

It has been established that hot air dryers are 60% cheaper to use than both linen and paper towels.

Installation of all Wandsworth dryers is straightforward. It is recommended that a concealed electrical supply enters the rear of the cabinets. **The cable entry is always right side rear or right side bottom.** Each machine is supplied with full instructions, and can be made for any power supply required.

The entire range of Wandsworth dryers are made in Britain to very high standards.

HD1/T

HD1/T

The Bunnie HD1/T machine is very efficient. The warm air can be directed to the hands or face by operating the diverter flap. Push button operation with automatic cut-out after 30 seconds. The unit is compact and simple in shape for easy cleaning.

Powerful but not noisy. Fast drying so lower electrical consumption and operating costs. Robust and vandal resistant, therefore particularly suitable for public and unsupervised areas.

The spring loaded button cannot be overpressed – it moves only 3mm and because of the element positioning no electrical parts are accessible without removing two socket head bolts positioned to prevent unauthorised removal of the housing. An auto resetting thermal overload protects against overheating and solid-state timing ensures extreme reliability.

HD2

The HD2 Bunnie automatic hand dryer has an attractive, robust & durable slimline moulded case.

The machine starts when hands are placed beneath the warm air outlet, and stops when the hands are withdrawn making it even cheaper to run than predetermined cycles. Electronics distinguish static objects placed under the dryer, to ensure that the machine cannot run continuously, for more than 60 seconds.

The economical motor runs at a surprisingly low noise level. All of these factors make the unit ideal for kitchens, offices, washrooms, hospitals, schools, food shops, etc.

HD2

HD3 automatic hand dryer has a stainless steel cover.

The machine starts when hands are placed beneath the warm air outlet, and stops when the hands are withdrawn making it even cheaper to run than predetermined cycles. Electronics distinguish static objects placed under the dryer, to ensure that the machine cannot run continuously, for more than 60 seconds.

The economical motor runs at a surprisingly low noise level. All of these factors make the unit ideal for kitchens, offices, washrooms, hospitals, schools, food shops, etc.

The Bunnie automatic hand and face dryer is built for rugged conditions but with the sophisticated 'hands off' operation. This model has a technical specification similar to the HD1/T heating air which can be comfortably directed at hands or face.

Operation is by an infra-red sensor which starts and stops automatically* and a safety cut-out ensures that objects placed beneath the machine do not accidentally or mischievously will not run the dryer longer than 80 seconds.

*When hands are placed beneath the warm air outlet.

The Bunnie HD8 automatic hand dryer has a similar technical specification to the HD5/T but the HD8 is hands only.

The stainless steel casing makes it a popular choice for catering and public areas.

Hand Dryers

HD9

HD9

The HD9 Bunnie automatic hand dryer has an attractive, slimline ABS moulded case.

The machine starts when hands are placed beneath the warm air outlet, and stops when the hands are withdrawn making it more economical to run than predetermined cycles.

Electronics distinguish static objects placed under the dryer, to ensure that the machine cannot run continuously, for more than 60 seconds.

The economical motor runs at a very low noise level which make it an ideal choice for kitchens, offices, offices, schools, hospitals etc.

Combi Units

Bunnie Combi BC1

Bunnie Combi BC1

The flush mounted model of the Combined Towel Dispenser, Warm Air Dryer and used Towel Receptacle provides all facilities for drying hands in the washroom.

The attractive one piece front panel is hinged on the right side and secured by two locks, overlapping the back box by 25mm all round. The back box has a depth of 133mm.

The paper Towel Dispenser will hold up to 400 C fold towels with a width of up to 230mm.

Access to the used Towel Receptacle is via a hinged flap which gives protection against contact with soiled towels.

Available in stainless steel or white finish.

Bunnie Combi BC2

This surface mounted model is to the same specification as the BC1 but with a non overlapping front panel and a matching back box with a depth of 150mm.

Available in stainless steel or white finish.
